| Abstract   | iv       |
| Kurzfassung  | viii     |
| Disclaimer   | xvi      |
| <b>1 Introduction</b>  | <b>1</b> |
| 1.1 Motivation   | 1        |
| 1.2 Research objectives  | 4        |
| 1.3 Methodology  | 6        |
| 1.4 Dissertation outline   | 6        |
| <b>2 Research background and related work</b>  | <b>8</b> |
| 2.1 Profitability of photovoltaic battery systems                                    | 8        |
| 2.1.1 The consumer-prosumer transition   | 8        |
| 2.1.2 Household specific profitability of PVB systems and load profile heterogeneity | 9        |
| 2.1.3 Related work   | 9        |
| 2.1.4 Research gap   | 14       |
| 2.2 Prediction of optimal PV battery configurations                                  | 15       |
| 2.2.1 PVB potential prediction during tendering phase                                | 15       |
| 2.2.2 Related work   | 15       |
| 2.2.3 Research gap   | 17       |
| 2.3 Performance of peer-to-peer (P2P) energy networks                                | 18       |
| 2.3.1 Definition, types and value streams of P2P networks                            | 18       |
| 2.3.2 Performance evaluation of P2P networks   | 20       |

|   |           |
|---|-----------|
| 2.3.3 Related work  | 21        |
| 2.3.4 Research gap  | 22        |
| <b>3 Techno-economic assessment of photovoltaic battery systems</b> | <b>24</b> |
| 3.1 Profitability of photovoltaic battery systems                   | 24        |
| 3.1.1 Local market situation  | 25        |
| 3.2 Data and Methodology  | 25        |
| 3.2.1 Overview  | 25        |
| 3.2.2 Data  | 26        |
| 3.2.3 Step 1: Techno-economic optimization model                    | 27        |
| 3.2.4 Step 2: Sensitivity analysis                                  | 33        |
| 3.3 Results   | 34        |
| 3.3.1 Simulation results for the base case scenario                 | 34        |
| 3.3.2 Sensitivity studies for different PV and battery costs        | 36        |
| 3.4 Discussion  | 43        |
| 3.4.1 Discussion of findings and implications                       | 43        |
| 3.4.2 Limitations and outlook                                       | 44        |
| 3.5 Conclusions   | 47        |
| <b>4 Prediction of optimal solar-battery configurations</b>         | <b>49</b> |
| 4.1 From simulations to machine learning models                     | 49        |
| 4.2 Data and methodology  | 50        |
| 4.2.1 Overview  | 50        |
| 4.2.2 Predictor training and testing                                | 50        |
| 4.3 Results   | 56        |
| 4.3.1 Prediction of profitability and optimal system configuration  | 56        |
| 4.4 Discussion  | 59        |
| 4.4.1 Discussion of findings and implications                       | 59        |
| 4.4.2 Limitations and outlook                                       | 60        |
| 4.5 Conclusion  | 61        |
| <b>5 Performance of peer-to-peer energy networks</b>                | <b>62</b> |
| 5.1 Aggregation effects in microgrids                               | 62        |
| 5.2 Methods and data  | 65        |
| 5.2.1 Overview  | 65        |

|          |  |            |
