1	Introduction	I
2	Preliminaries and preparation	1
2.1	Grothendieck ringed spaces	1
2.2	Rigid analytic varieties	3
2.3	On some quotients of rigid analytic varieties	9
2.4	PGL over a non-Archimedean local field	11
2.5	On lattices over admissible coefficient subrings	14
3	On stratifications of rigid analytic varieties by global sections	19
3.1	Characterization of the Grothendieck topology	19
3.2	The characterization in a special case	21
3.3	Stratification and normalization	25
4	On the building for PGL over a non-Archimedean local field	31
4.1	On a geometric covering attached to any simplicial complex	31
4.2	The Bruhat-Tits building for PGL	33
4.3	A set of seminorms	34
4.4	Interpretation of seminorms through submodules	35
4.5	The building as a quotient by a free $\mathbb{R}_{>0}$ -action	39
4.6	Metrization	42
5	Quotients of Drinfeld's period domain by discrete groups	47
5.1	Admissibility of the period domain	47
5.2	Quotients by discrete subgroups	51
5.3	Some connected subsets of Drinfeld's period domain	54
5.4	Quotient by a discrete subgroup of a codimension 1 vector subspace	62
6	Compactification of analytic irreducible components	71
6.1	Grothendieck topology on the pre-quotient	72
6.2	Structure of Grothendieck graded ringed space	74
6.3	Morphisms	80
6.4	Examples of global sections of twisting modules	82
6.4.1	Eisenstein series	82
6.4.2	Poincaré-Eisenstein series	84
6.5	Separation of points	87
6.6	Fourier expansion of weak modular forms	90

7	Compactification of analytic moduli spaces	97
7.1	Structure of Grothendieck graded ringed space	98
7.2	Morphisms	101
7.3	Case of principal congruence subgroups	102
7.4	Isomorphism classes of lattices with level structures	106
8	Compactifications of algebraic moduli spaces	109
8.1	Pink's compactification	109
8.2	Moduli space of A -reciprocal maps	112
9	Comparison of algebraic and analytic compactifications	119
10	Consequences of the comparison	129
