

Table of contents

Table of contents	I
Acknowledgments	VII
Summary	XI
Riassunto	XV
1 Introduction	1
1.1 Thesis motivation	3
1.1.1. Total hip replacement	3
1.1.2. Preclinical wear testing of implants	5
1.1.3. Estimation of hip loads through musculoskeletal modelling	6
1.2 Thesis aims	8
1.3 Thesis outline	8
1.4 References	12
2 Background	21
2.1 Musculoskeletal modelling	23
2.1.1. Generic and subject-specific models	25
2.1.2. Lower-limb models and hip mechanics	26
2.1.3. Model validation and applications	27
2.2 Evaluation of total hip replacement outcomes	28
2.3 Factors affecting implant outcome	29
2.3.1. Surgical approach and muscle weakening	30
2.3.2. Implant positioning, dislocation, instability and edge loading	31
2.3.3. Implant wear	33
2.3.4. Contact pathways	35
2.4 Conclusion	38
2.5 References	39

3	Development and validation of a lower limb model for prediction of hip loads	57
3.1	Abstract	60
3.2	Introduction	61
3.3	Methods	63
3.3.1.	Musculoskeletal model	63
3.3.2.	Kinematic input, model scaling, and inverse dynamics analysis	63
3.3.3.	Validation metrics	64
3.3.4.	Muscle contribution study and geometry modifications	65
3.4	Results	73
3.4.1.	Muscle contribution study	73
3.4.2.	Hip contact forces	74
3.4.3.	Muscle activity	76
3.5	Discussion	78
3.6	Conclusion	82
3.7	Supporting information	83
3.8	References	94
4	Patient characteristics affect hip loads during gait	101
4.1	Abstract	104
4.2	Introduction	105
4.3	Methods	107
4.3.1.	Patients	107
4.3.2.	Data capture	107
4.3.3.	Data processing	108
4.3.4.	Musculoskeletal modelling	108
4.3.5.	Stratification by patient characteristics	109
4.3.6.	Stratification by functional ability	109
4.3.7.	Data analysis	110
4.3.8.	Statistical Parametric Mapping (SPM) analysis	110

4.4	Results	112
4.4.1.	Patient demographics	112
4.4.2.	Musculoskeletal model simulations	112
4.4.3.	Peak hip contact forces	115
4.4.4.	Statistical parametric mapping	115
4.4.5.	BMI	115
4.4.6.	Age	116
4.4.7.	Functional ability	116
4.5	Discussion	123
4.5.1.	BMI	124
4.5.2.	Age	124
4.5.3.	Functional ability	125
4.5.4.	Limitations	126
4.6	Conclusion	127
4.7	Acknowledgments	128
4.8	Supporting information	128
4.9	References	131
5	Hip load variability during activities of daily living	135
5.1	Abstract	138
5.2	Introduction	139
5.3	Methods	141
5.3.1.	Motion-capture data acquisition	141
5.3.2.	Patient Characteristics	141
5.3.3.	Activities of daily living	143
5.3.4.	Data processing	144
5.3.5.	Hip contact force analysis	144
5.3.6.	Statistical parametric mapping (SPM) analysis	145
5.4	Results	146

5.4.1.	Hip contact forces during activities of daily living	146
5.4.2.	Hip contact forces stratified by gender	151
5.4.3.	Inter-patient variability	153
5.5	Discussion.....	154
5.6	Conclusion.....	157
5.7	Supporting information.....	158
5.8	References	167
6	Hip contact force pathways during activities of daily living.....	171
6.1	Introduction	174
6.2	Methods	175
6.3	Results	176
6.4	Discussion.....	180
6.5	Outlook	181
6.6	References	183
7	Effect of patient-specific load variability on the wear of lubricated hip implants	189
7.1	Introduction	192
7.2	Methods	193
7.3	Results	195
7.4	Discussion.....	197
7.5	Outlook	198
7.6	References	200
8	Effect of cup medialization on hip loads	205
8.1	Abstract	208
8.2	Introduction	209
8.3	Methods	212
8.4	Results	217
8.4.1.	Contact force magnitude.....	217
8.4.2.	Contact force path in the cup.....	218

8.4.3.	Abductors activity.....	219
8.5	Discussion.....	220
8.6	Conclusion.....	225
8.7	Acknowledgments	225
8.8	References	226
9	Synthesis	229
9.1	Development and validation of a musculoskeletal model of the lower limb for accurate prediction of hip loads.....	233
9.2	Hip load variability associated with patient characteristics	235
9.3	Hip load variability during activities of daily living.....	236
9.4	Hip load distribution at an implant-scale level.....	237
9.5	Effect of hip load variability on implant wear.....	237
9.6	Effect of implant positioning on hip loads.....	238
9.7	Limitations and future research.....	239
9.8	Conclusion.....	243
9.9	References	245
	Curriculum Vitae.....	251
