Abstract	i
Zusammenfassung	iv
Acknowledgements	v
Abbreviations	ix
1 Introduction	1
1.1 Motivation	1
1.2 Tasks and Objectives	2
1.3 Thesis Structure	3
2 Snow Characteristics and Observation Techniques	5
2.1 Snow Characteristics	5
2.1.1 Snow Depth	5
2.1.2 Height of New Snow	5
2.1.3 Height (Vertical Coordinate)	5
2.1.4 Snow Density	6
2.1.5 Snow Water Equivalent	6
2.1.6 Snow Wetness	6
2.1.7 Water Equivalent of Snowfall	6
2.2 Snow Water Equivalent Observation Techniques	6
2.2.1 Terrestrial Measurement Techniques	7
2.2.2 Airborne or Satellite-Based Measurement Techniques	8
2.3 GNSS Remote Sensing for the Cryosphere	8
2.3.1 Remote Sensing Using Reflected GNSS Signals	8
2.3.2 Remote Sensing Using Refracted GNSS Signals	9
3 GPS Refractometry	11
3.1 GPS Signal Interaction Within a Snow Layer	11
3.1.1 Attenuation	11
3.1.2 Refraction	12
3.1.3 Excess Path Length	13
3.2 Snow Water Equivalent Estimation Model	15
3.3 Differential GPS	16
3.3.1 Zero Differences	16
3.3.2 Single Differences	17
3.3.3 Double Differences	17
3.4 Collinearity of Parameters	18

3.5	Data Analysis	19
4	Conclusions	21
4.1	Synopsis of Results	21
4.2	Scientific Relevance	23
4.3	Potential Applications	24
4.4	Outlook	24
	References	25
