

## Table of Contents

List of Tables	V
List of Figures	VII
Zusammenfassung (Deutsch)	IX
Abstract (English)	XIII
<b>Synthesis</b>	<b>1</b>
Introduction and theoretical background	1
Different types of spatial knowledge	2
Knowledge in the head and in the world	4
Types of aided wayfinding	9
Cognitive aspects of map characteristics and interactions	12
Individual abilities in spatial cognition	17
Compatibility, usability, and adaptability	21
Importance and Impact	22
Description of the five articles presented in Chapter 2-6	23
Study I: Wayfinding in multilevel buildings with navigation assistance: Impact on wayfinding and spatial learning	25
Study I(b): User experience and strategy choices during navigation: A content analysis of navigators using different types of wayfinding devices	32
Study II: Use or loose spatial knowledge: Is there a trade-off between environmental learning and efficient wayfinding?	37
Study II(b): The Interplay of Pedestrian Navigation, Wayfinding Devices, and Environmental Features in Indoor Settings	46
Study III: The advantage of egocentric or allocentric information for indoor navigation. Are environment-adaptive solutions better?	49
Discussion and Conclusion	56
Wayfinding behavior	59
Spatial Learning	62
Information sources and environmental cues	65
Individual differences	67
Outlook	71
Conclusion	73
References	75

**Navigation assistance in multilevel buildings: Impact on wayfinding and spatial**

<b>learning</b>	95
Introduction	96
Method	104
Participants	104
Materials	104
Design	109
Procedure	109
Results	109
Wayfinding Performance	110
Spatial Learning	114
Relations of Individual Differences to Spatial Learning	115
Discussion	118
Wayfinding Behavior	118
Spatial Learning	119
Individual Differences	121
Sign and Map Use	122
Limitations and Future Research	123
Conclusion	125
References	126
<b>User experience and strategy choices during navigation: A content analysis of navigators using different types of wayfinding devices</b>	133
Introduction	134
Method	135
Performance data: Search times	137
Survey Data: User Experience questionnaires	138
Survey data: Open questions	140
Verbal Data: Thinking Aloud protocols	140
Results and Discussion	140
Performance data: Search times	140
Survey Data: User Experience	141
Survey data: Open questions	141
Verbal Data: Thinking Aloud protocols	144
Summary and Conclusion	146
References	149

**Use or lose spatial knowledge: Is there a trade-off between environmental learning and efficient wayfinding?**

<b>and efficient wayfinding?</b>	151
Introduction	152
Background	153
Method	157
Participants	157
Materials	158
Design	162
Procedure	162
Results and Discussion	163
Wayfinding Performance	164
Strategy Choice	165
Spatial learning	166
Visual Attention	168
Individual Differences	169
Limitations and Future Research	170
Acknowledgments	171
References	172
<b>The Interplay of Pedestrian Navigation, Wayfinding Devices, and Environmental Features in Indoor Settings</b>	179
Introduction	180
Background	181
Method	186
Experimental design	187
Procedure	187
Results	189
Effect of navigation device on fixation frequencies at decision points	190
Effect of navigation device on fixation patterns over decision points types	193
Discussion	196
Effect of navigation device on fixation patterns over decision points types	196
Effect of navigation device on fixation patterns over decision points	197
Conclusions	198
References	200

<b>Advantages of egocentric and allocentric information for indoor navigation. Is there a benefit of environment-adaptive solutions?</b>	<b>207</b>
Introduction	208
Method	215
Participants	215
Material	215
Design	220
Procedure	220
Results & Discussion	221
Wayfinding Performance	221
Spatial Learning	224
Usability of the visualization	226
Individifferences	226
Conclusion	227
Limitations and Future Research	229
