Abstract . . . . .	iii
Zusammenfassung . . . . .	v
List of Tables . . . . .	xi
List of Figures . . . . .	xiii
<b>1 Introduction</b>	<b>1</b>
1.1 Aim of the thesis . . . . .	2
1.2 Outline . . . . .	3
<b>2 Cardiac Arrhythmias and their Treatments</b>	<b>5</b>
2.1 Electrical conduction system of the heart . . . . .	5
2.2 Arrhythmias . . . . .	6
2.3 Arrhythmia treatments . . . . .	7
2.4 Radiofrequency ablation procedure . . . . .	7
2.4.1 Manual catheter . . . . .	9
2.4.2 Catheter remote control . . . . .	9
2.4.3 Remote magnetic navigation . . . . .	10
<b>3 Magnetic Catheters</b>	<b>13</b>
3.1 Control of a magnetic catheter . . . . .	13
3.1.1 Magnetic catheter dimension . . . . .	14
3.1.2 Achievable magnetic torque and magnetic force . . . . .	15
3.2 Magnetic catheter kinematics . . . . .	17
3.2.1 Magnetic field azimuthal angle . . . . .	19
3.2.2 Magnetic field inclination angle . . . . .	20
3.2.3 Magnetic field magnitude . . . . .	21
3.2.4 Catheter insertion length . . . . .	22

3.3	Magnetic catheter modeling . . . . .	22
3.3.1	Catheter maximal flexural rigidity . . . . .	23
3.3.2	Catheter minimal flexural rigidity . . . . .	24
3.3.3	Catheter deflection factor . . . . .	25
3.3.4	Impact of gravity on catheter . . . . .	26
3.3.5	Inverse kinematics . . . . .	27
3.3.6	Catheter workspace . . . . .	29
3.4	Cosserat rod model . . . . .	31
3.4.1	Non-negligible gravity . . . . .	31
3.4.2	Impact of torsional rigidity . . . . .	34
3.4.3	Impact of sheer and extension rigidity . . . . .	35
3.4.4	Cosserat versus constant curvature rod model . . . . .	36
3.5	Three-magnet catheters . . . . .	36
3.5.1	Catheter workspace . . . . .	36
3.5.2	Velocity Jacobian jump discontinuities . . . . .	38
3.6	Catheter flexural rigidity design space . . . . .	39
3.7	Catheter experimental data . . . . .	41
3.7.1	Catheter kinematic symmetry . . . . .	41
3.7.2	Catheter workspace . . . . .	42
3.8	Magnetic catheters in constrained space . . . . .	44
3.9	Conclusion . . . . .	45
<b>4</b>	<b>Variable Stiffness Catheters</b>	<b>47</b>
4.1	Design and development of the variable stiffness catheter . . . . .	48
4.1.1	Selection of the variable stiffness strategy . . . . .	48
4.1.2	Description of the variable stiffness catheter . . . . .	49
4.2	Variable stiffness catheter performance . . . . .	51
4.2.1	Shape fixity of variable stiffness catheter . . . . .	51
4.2.2	Deflection curves of variable stiffness catheter . . . . .	52
4.2.3	Workspace of the variable stiffness catheter . . . . .	53
4.2.4	Thermal behavior of variable stiffness catheter . . . . .	55
4.3	Variable stiffness catheter remote navigation . . . . .	57
4.3.1	Forward kinematics . . . . .	58
4.3.2	Variable stiffness catheter workspace . . . . .	58
4.3.3	Determining catheter configuration to target position . . . . .	59

4.3.4	Selection of optimal catheter configurations . . . . .	60
4.3.5	Motion between catheter configurations . . . . .	61
4.3.6	Path following . . . . .	62
4.4	Conclusion . . . . .	63
<b>5</b>	<b>Magnetic Sheath</b>	<b>65</b>
5.1	Magnetic sheath mechanical design . . . . .	67
5.2	Magnetic sheath interoperability . . . . .	68
5.3	Magnetic sheath performance . . . . .	69
5.3.1	Comparison of kinematics with magnetic catheters . . . . .	69
5.3.2	Experimental results . . . . .	69
5.4	User control for cardiac ablations . . . . .	70
5.5	Conclusion . . . . .	73
<b>6</b>	<b>Tethered Magnet</b>	<b>75</b>
6.1	Tethered magnet control . . . . .	76
6.1.1	Magnetic manipulation . . . . .	76
6.1.2	Tethered magnet model . . . . .	79
6.1.3	Tethered magnet inverse kinematics . . . . .	80
6.1.4	Magnetic field requirement . . . . .	81
6.1.5	Tethered magnet forward kinematics . . . . .	82
6.1.6	Applied force on heart chamber wall . . . . .	83
6.2	Experiment and results . . . . .	84
6.2.1	Aeon Phocus . . . . .	84
6.2.2	Open-loop trajectories . . . . .	85
6.2.3	Force measurements . . . . .	85
6.2.4	Discussion . . . . .	87
6.3	Conclusion . . . . .	87
<b>7</b>	<b>Conclusion</b>	<b>89</b>
	References . . . . .	91
