Table of Contents	ii
Preface	vi
1 Introduction	1
2 Theory of Hilbert spaces	15
2.1 Topology and geometry of Hilbert spaces	15
2.1.1 Hilbert spaces	16
2.1.2 Geometry of Hilbert spaces	23
2.1.3 Abstract constructions with Hilbert spaces	31
2.1.4 Linear operators on Hilbert spaces	35
2.2 Spectral theory of linear operators	43
2.2.1 The spectrum of an operator	43
2.2.2 Functional calculus	47
2.2.3 The spectral theorem	53
2.2.4 One parameter unitary semigroups	59
2.3 Reproducing kernel Hilbert spaces	65
2.3.1 Definition and properties of RKHS	65
2.3.2 Interpretation of RKHS	73
3 Statistical inference and splines	81
3.1 Hilbert spaces and estimation	81
3.1.1 Stochastic processes and random fields	82
3.1.2 Abstract splines for estimation	90
3.1.3 Hilbert space constructions	95
3.2 Construction of reproducing kernels	109
3.2.1 Properties of covariance matrices	109
3.2.2 Approximation of kernels	114
3.2.3 Methods of construction and design	117
3.3 Basic geodetic applications	124
3.3.1 Modelling with stochastic processes	125
3.3.2 Statistical testing	132

4	Theory of kernel inference	137
4.1	Group algebras	137
4.1.1	(Locally) Compact groups and their algebras	138
4.1.2	Group characters and the Fourier transform	144
4.1.3	Bochners theorem	149
4.2	Kernel inference	151
4.2.1	Naive kernel inference	152
4.2.2	Regularization terms	158
4.2.3	Formulation of kernel inference tasks	162
4.3	Practical implementation	173
4.3.1	Semidefinite programming	173
4.3.2	Unconstrained kernel inference	179
4.3.3	Extensions	186
4.4	Selected applications	194
4.4.1	Robust estimation	194
4.4.2	Kernel estimation	199
5	Applications to terrestrial radar interferometry	209
5.1	Basics of terrestrial radar interferometry	209
5.1.1	Survey of principles and instruments	210
5.1.2	Typical processing chain	215
5.1.3	Practical applications and limitations	221
5.2	Mitigation of atmospheric effects	227
5.2.1	The atmospheric phase screen	227
5.2.2	Bisgletscher case study	235
5.2.3	A stochastic model for TRI	239
5.2.4	Reproducing kernels arising in TRI	244
5.2.5	Spatiotemporal deformation estimation	258
5.2.6	Results and comparisons	272
6	Conclusions and outlook	279
