

Contents

Zusammenfassung	VII
Abstract	X
1 Introduction	1
1.1 2D polymer synthesis strategies	7
1.1.1 Growth chemistries and monomer design	7
1.1.2 Single crystal approach	10
1.1.3 Interfacial approaches	14
1.1.4 Self-assemblies in suspension	18
1.2 Challenges to be solved for applications	22
1.3 Aim of the thesis	27
1.4 Choice of monomer	28
2 Technical scale synthesis of monomer 1	31
2.1 Original synthesis	33
2.2 Direct approach via anthracenediol 7	36
2.3 Direct approach with antraquinone	40
2.4 Improving and upscaling	41
2.4.1 Improvements on the reduction	41
2.4.2 One-pot formation of premonomer 2	48
2.4.3 Improvements on the dehydrogenation	52
2.5 Comparison of old and new synthesis	56
2.6 ¹ H NMR spectroscopy of monomer 1	57
2.7 Conclusion and outlook	62
3 Synthesis of functionalised monomers	64
3.1 Introducing functional groups	71
